I. SUMMARY

I design complex enterprise software so it is clear to use and consistent to build. 23 years across healthcare, insurance and fintech products. Five design systems built alongside engineering, plus contributions inside GE Healthcare's Edison system (2020 Red Dot Award for Interface Design) and Verizon's. On your team I bring a component library engineers can build from, interface craft that holds up in dense, data-heavy screens, and agent workflows: Claude Code and Codex handle multi-step production, prototypes, front-end code and documentation, and the design calls stay mine. Accessibility to WCAG 2.2 is in the work from the first screen.
